Notes :
Thank you for your business !
Please make payment ASAP.

Terms & Conditions Apply.

TERMS & CONDITIONS

1. Invoice Purpose

This invoice represents the annual subscription for the production cloud infrastructure required to host and operate the Soliva Guard E-Commerce Platform.
The amount covers the cloud server resources allocated exclusively for the client's production environment and the initial provisioning of the infrastructure.
The subscription period is valid for 12 months from the date of deployment.

2. Infrastructure Specifications

The production environment will be provisioned using enterprise-grade cloud infrastructure with the following minimum configuration:

Specification	Details
Processor	4 Dedicated Intel® / AMD vCPU
Memory	8 GB DDR4 RAM
Storage	80 GB NVMe SSD
Operating System	Ubuntu Server LTS
Environment	Dedicated Production Infrastructure

3. Billing Structure

The total invoice amount is ₹12,000, representing the annual cloud infrastructure subscription.
For accounting purposes, this is equivalent to approximately ₹1,000 per month; however, the client is making a single one-time annual payment.
This approach eliminates monthly payment interruptions and ensures uninterrupted hosting throughout the subscription period.

4. Cloud Infrastructure Management

The production infrastructure is managed entirely by TATVEIN Technologies.

Cloud hosting services may be provisioned using one or more enterprise cloud providers depending on:

- **Infrastructure availability**
- **Regional availability zones**
- **Network latency**
- **Resource availability**
- **Load balancing requirements**
- **Disaster recovery planning**
- **Performance optimization**

This multi-cloud deployment strategy allows the infrastructure to remain highly available while ensuring better operational stability.

The selection or migration of infrastructure providers remains the responsibility of TATVEIN Technologies and does not require any action from the client unless the service scope changes.

5. Internal Subscription Management

Although the client is paying the annual subscription in advance, cloud infrastructure providers may bill TATVEIN Technologies on different billing cycles (monthly, quarterly, or annually).

Any such internal billing arrangements are managed solely by TATVEIN Technologies and do not affect the client's annual hosting agreement.

The client will not receive additional hosting invoices during the active subscription period unless infrastructure upgrades are requested.

6. Services Included

The following services are included as part of the server deployment without additional setup charges:

- **Production VPS Provisioning**
- **Ubuntu Server Installation**
- **Secure SSH Configuration**
- **Docker Engine Installation**
- **Docker Compose Configuration**
- **Nginx Reverse Proxy Configuration**
- **SSL Certificate Installation**
- **Domain & DNS Configuration**
- **Initial Production Deployment**
- **Production Environment Optimization**
- **Firewall Configuration**
- **Basic Security Hardening**
- **Server Validation & Health Checks**
- **These services are provided during the initial deployment phase.**

7. Services Excluded

The following services are not covered under this infrastructure invoice:

- **Website Maintenance**
- **Bug Fixes**
- **Feature Development**
- **UI/UX Changes**
- **New Module Development**
- **API Enhancements**
- **Database Modifications**
- **Domain Purchase or Renewal**
- **Third-Party Service Charges**
- **Email Service Subscription Charges**
- **Such services are covered separately under the agreed maintenance contract or future development agreements.**

8. Infrastructure Availability

TATVEIN Technologies will make every reasonable effort to maintain maximum infrastructure availability.

However, scheduled maintenance windows, cloud provider maintenance, force majeure events, internet outages, or circumstances beyond reasonable control may occasionally affect service availability.

These events shall not constitute a breach of service.

9. Infrastructure Scaling

The deployed infrastructure has been selected based on the current business requirements.

If future business growth requires additional computing resources, including:

- **Higher CPU allocation**
- **Additional RAM**
- **Increased Storage**
- **Dedicated Database Servers**
- **Load Balancers**
- **CDN Integration**
- **Backup Servers**
- **Disaster Recovery Infrastructure**
- **the client will be informed in advance, and any additional infrastructure costs will require prior approval.**

10. Renewal Policy

- **The cloud infrastructure subscription remains valid for 12 months.**
- **Prior to expiry, the client will receive a renewal notification.**
- **Renewal pricing may change due to:**
- **Changes in cloud provider pricing**
- **Currency exchange fluctuations**
- **Applicable taxes**
- **Infrastructure upgrades requested by the client**

11. Payment Terms

- **Invoice Amount: ₹12,000**
- **Billing Cycle: Annual**
- **Payment Mode: Bank Transfer / UPI**
- **Deployment will commence after payment confirmation.**
- **The invoice is considered accepted once payment has been successfully received.**

12. Ownership

The deployed production infrastructure is allocated exclusively for the Soliva Guard application throughout the active subscription period.
All application source code, databases, and business data remain the property of the client, while infrastructure provisioning, deployment methodology, automation scripts, and operational procedures remain part of TATVEIN Technologies' implementation practices unless otherwise agreed in writing.

13. Support & Maintenance

This invoice covers only the cloud infrastructure subscription.
Ongoing services such as:

- **Application monitoring**
- **Bug fixing**
- **Security updates**
- **Performance optimization**
- **Backup verification**
- **Server monitoring**
- **Technical support**

are governed separately under the agreed maintenance plan.
